"... an assassination in progress and it is almost done. And the assassins are clearly determined to see it through" Muhammad Ibraheem Zakzaky

This Saturday the 6th of July 2019, I met with my father and my mother. As has already been stated to the public before, my father was found to have unusually excessive and life threatening concentrations of lead and cadmium in his blood. As a result of this various experts we have consulted recommended immediate hospitalization in a properly equipped facility and other medical procedures in order to try to save his life. This was over a month ago, yet nothing has been done to date.

My mother on the other hand, whose numerous medical issues were well known since before, has similarly received none of the care that was recommended. The frequent attack of chronic pain which she had been suffering on average on a monthly basis has now turned into a daily routine. And to date none of the underlying medical issues causing these attacks has been addressed.

When we met aside from what could be visibly seen of their deteriorating condition such as my fathers teeth which in the space of a month has turned from dark brown to virtually jet black, my father also informed me of how his condition has been worsening since the last time we met. Most disturbing of these issues is the fact that he is beginning to show signs that are very similar to what happened before he had a stroke in January 2018. Where as in the past he had only been suffering intermittent attacks of chronic pain, it has now become virtually a daily occurrence.

Although I do not wish to give in to despair, at this current point I feel that there is little left that I can do to try to save them, as every single attempt we have currently made has either been deliberately frustrated or simply ignored. Years ago I stated that it appears that there is a deliberate attempt to assassinate my parents through deliberate negligence towards their health, back then I did not know the extent of it and I am telling you. The fact that they have managed to survive this long is a miracle.

Based on all that I have heard from medical experts over the past week, it is with a heavy heart that I decide to say this, but the time frame during which anything can be done to save their health has virtually run out. There is also at this time nothing that I can cling what little hope I

have left on. This has always been an assassination in progress, and it is almost done. And the assassins are clearly determined to see it through.

Mohammed Ibraheem Zakzaky
